

# Jemish Viradiya

## Twitter App

### Description:

I have created Twitter API to upload a tweet and see the latest tweets.

This API has been created using Node.js and Express with advanced coding features.

There are 2 modules. 1) Upload a tweet 2) Show a list of recent tweets.

### Technology

Used HTML, CSS and external CSS library to develop front-end.

Used Node.js, Express, and some third-party libraries, such as Cors, Monk (MongoDB), bad-words

MongoDB has been used to store data.

### File Structure

**DEMO:-** is the main project file

- **Server.js:-** is for creating a Node.JS web server
- **Index.html:-** is a home page
- **Public (Folder)**
  - **Client.js:-** To develop client-side code
  - **Styles.css:-** To providing basic CSS to the webpage
  - **Images**
- **Server (Folder)**
  - **Index.js:-** To develop server-side code

**Note:-** Client-side code and server-side code both run on a different server. For example, server-side code run on localhost:5000, while client-side code runs on localhost:3000.
